

For nearly 2 decades, Qt Training has been preparing quality training content to Qt Developers. Accompanied by examples that present aspects of Ot programming with accuracy and assisted by handson labs, Qt is brought to life in the classroom and adapted to your specific needs. In a collaborative effort between the Ot Dev Team, Ot Training Partners

and Qt Learning, we put strong emphasis on perfecting course flow to present more information in less time while making material easier to understand.

Not only do our courses provide you with confidence and knowledge, but you also get valuable time with Qt Authorized Trainers who, in addition to being trainers, are extremely knowledgeable and experienced consultants who are eager to share what they themselves have learned about Qt.

Open Enrollment Courses Open enrollment courses are held throughout the world for you to sign up and learn together with other Qt developers. There's a variety of courses available as open enrollment courses. To participate, all you have to do is choose your desired course from the schedule and contact us or the training partner offering that specific course at the time and location which best suits you.

See our schedule for more information: http://qt.nokia.com /training/

Course

Qt Essentials - Widgets Edition Qt Essentials - Graphics Edition Ot Essentials - Embedded Linux Edition

Programming with Qt Programming with Qt for Embedded

Moving from Qt3 to Qt4

Qt Quick for C++ Developers

Duration

5 Days

2+ Davs

2+ Days

If your company has special needs for training, on-site classes can be 3 Davs customized on request and the 3 Days instructor will come to your site so you can comfortably learn in your 3 Days working environment. 5 Davs

On-Site Training

On-site courses work best for companies that:

- Have several employees with the same background who need to learn Ot
- Want to specify the timing for the training
- Want to design a course for a set of specific needs

Ot Ouick for C++ Developers

A New Qt Training Course

Course Modules:

Introduction to Qt Quick:

Meet Ot Quick Concepts

Composing User Interfaces:

Nested Elements Graphical Elements Text Elements **Anchor Layout**

User Interaction:

Mouse Input **Keyboard Input**

States and Transitions:

States State Conditions Transitions Animations: Animations Easing Curves **Animation Groups** Lab – Bouncing Ball

Presenting Data:

Arranging Items Data Models **Using Views** XML Models Views Revised

Ot Quick Structures: Components Modules

information available from **Qt Training and** all Qt Training Partners

Our Courses:

- Are class-room based and instructor-led
- Are delivered by our Qt Training Partners using authorized trainers

To see what modules are covered in which courses,

please refer to the opposite side of this flyer

or visit http://qt.nokia.com/training

- Are based on theory, discussion and hands-on lab exercises which will test your knowledge
- Provide Qt usage examples that are designed to underline the theory of the course content
- Will help you understand the concept and strategy of our product

Fundamentals of Qt: the story of Qt, developing a "Hello World" using Qt Creator, practical tips for developers Objects in Qt: common features of Qt's object models, object communication using signals & slots, signal & slot variations, handling events in Qt Core Classes: string handling, item container, file handling, variants Widgets: common widgets, layout management, guidelines for custom widgets Painting and Styling: painting on widgets, color handling, painting operations, style sheets Application Creation: main windows, settings, resources, translation for developers, deploying Qt applications Dialogs and Designer: dialogs, common dialogs, Qt Designer Model/Niew: item widgets, Model/View concept, custom models, item views (optional) Data 10: SAX and DOM XML APIs, XML streaming	ming with nbedded nux

API, SQL database API, SQL models	×
Graphics View: using GraphicsView classes, transformations and coordinate systems, creating custom items	tional)
Graphics View 2: widgets in a scene, drag and drop, effects, performance tuning (optional)	X
Animation: starting animation, animation groups, states and animations, events and transitions (optional)	tional)
Qt Embedded: introduction, embedded setup, fonts, interprocess communication, customizing QVFb	
Qt Embedded Adaptation: display management, pointer handling key handling, window decoration, feature configuration, performance tuning	
Inter-Process Communication: running processes, shared memory with Qt, QtDBus—Qt (optional) (optional)	
Optional C++ Refresher Day (for onsite training)	
Optional Modules X X X	

Other Courses

Moving from Qt 3 to Qt 4: For those who are already familiar with Qt 3, we offer the 3-5 day "Moving from Qt 3 to Qt 4" course which can be customized to suit each customer's application needs. Moving from Qt 3 to Qt 4 is incomparable to the courses listed in the course comparison chart below.
